NEW Roman 'V'-Batten Bird-Stop flashing

In response to contractor requests we have upgraded our Roman 'Bird-Stop' flashing with an integral batten.

The 'Roman V-Batten Bird-Stop flashing' now incorporates a panel support batten that eliminates the need for a costly 1X4 wood batten to be used across the fascia-eave to support the panel.

Because this new part uses substantially more metal, the price will be higher for this new version; however the new part eliminates the need for the fascia support batten and the labor to install it. The new Roman 'V'-batten Bird-Stop can now be installed with the other perimeter flashing prior to panel install so an underlay inspection can be requested.

The new 'Roman V'-Batten Bird-Stop' flashing in standard stone-coat colors will be in production during December 2006. The new part number is noted below.

ITEM	PART # - XX = Color	METRO INVOICE INFO
Existing Roman Bird-Stop Flashing	3135-XX	
NEW 'Roman 'V'-Batten Bird-Stop' Flashing	3134-XX	'Roman V-bat Bird-Stop'

Metro will carry a small quantity of the old shape as we transition to this new version. We can match or make-up inventory quantities to fulfill job lots as needed. Make sure you define which parts you need especially if you are matching to your inventory for job-lots.

Due to the differences between each part it's recommended that you do not mix the two in inventories or on job-lots.

Metro's Roman Tile Batten-Less Install Details are available on the Metro website www.metroroofs.com with the new 'Roman V-batten Bird-Stop' shown.
